## MODULE 2

### INTRODUCTION TO DIGITAL RIGHTS

- Digital rights — which include the right to freedom of expression, privacy and access to information — are the same fundamental human rights as those enjoyed offline but adapted to a new age of technology.
- In understanding digital rights, it is also important to understand the role of internet intermediaries, a range of actors who play a critical role in protecting or undermining freedom of speech and associated digital rights online.
- Freedom of expression online is uniquely powerful because of its borderless nature, but it has created new legal questions and consequences.
- Human rights defenders must engage with the new challenges online and act to protect and promote digital rights in the rapidly evolving online world.

### INTRODUCTION

Digital rights are human rights in the digital realm. The term ‘digital rights’ speaks to questions about how the same rights that are fundamental to all humans — such as freedom of expression, privacy, and access to information — are exercised and protected in the era of the internet, social media, and technology.

There is a tension between human rights and freedoms and the rise in restrictions of access to online spaces, which is continuing with increased political polarisation and the growing powers of non-state actors. While many countries have made progress in regulating the digital sphere, including passing data protection laws to protect privacy online, some regulations, such as laws criminalising hate speech and fake news, for example, are abused in order to silence and stifle criticism and freedom of expression online. Protecting and developing online spaces where human rights can be respected and promoted requires effective responses to oppressive regulations and innovative solutions.

Understanding digital rights is crucial to being able to protect fundamental human rights in any domain, as very little of our lives today is immune from the forces of technology and the internet, which have reshaped how humans communicate, participate in public life, and behave. The COVID-19 pandemic has only enhanced our dependence on the digital realm and has exposed some of the emerging challenges in this regard, such as misinformation and online gender-based violence. Digital rights are the rights that apply in these spaces, including the particular nuances which come with the application of human rights online.

This module seeks to provide an overview of digital rights and the trends affecting freedom of expression online in Africa.

It is now firmly entrenched by both the African Commission on Human and Peoples' Rights<sup>1</sup> (ACHPR) and the United Nations<sup>2</sup> (UN) that the same rights that people have offline must also be protected online, in particular the right to freedom of expression. As stipulated in article 19(2) of the International Covenant on Civil and Political Rights (ICCPR), the right to freedom of expression applies regardless of frontiers and through any media of one's choice.

However, how established principles of freedom of expression should be applied to online content and communications is in many ways still being determined. For example, do bloggers and citizen journalists count as journalists and should they be afforded the same protections with regard to freedom of expression? How should states regulate the re-tweeting or resharing of hate speech? What about regulations for defamatory statements from anonymous accounts? These challenges are actively being grappled with by policymakers and courts around the world.

### Examples of digital rights issues

To give an idea of the range and complexity of the issues included in the umbrella term 'digital rights,' here are some examples:

- **Access to the internet.** Although an express right to the internet has not, as yet, been recognised in any international treaty or similar instrument, there has been much debate about whether the internet should be considered a human right.<sup>3</sup> Nevertheless, there is an increasing recognition that access to the internet is indispensable to the enjoyment of an array of fundamental rights.
- **Interferences to access to the internet.** Despite the above, restrictions on accessing the internet through internet shutdowns, the disruption of online networks and social media sites, and the blocking and filtering of content continue to be used. The ICCPR has been interpreted as providing an absolute prohibition on measures such as these which constitute prior restraint.<sup>4</sup>

<sup>1</sup> ACHPR, 'Resolution on the right to freedom of information and expression on the internet in Africa', ACHPR/Res.362(LIX) (2016) (accessible at: <https://www.achpr.org/sessions/resolutions?id=374>) and ACHPR, 'Declaration on Principles of Freedom of Expression and Access to Information in Africa,' (2019) (accessible at: [https://www.achpr.org/public/Document/file/English/Declaration%20of%20Principles%20on%20Freedom%20of%20Expression\\_ENG\\_2019.pdf](https://www.achpr.org/public/Document/file/English/Declaration%20of%20Principles%20on%20Freedom%20of%20Expression_ENG_2019.pdf)).

<sup>2</sup> UN Human Rights Council, 'The promotion, protection and enjoyment of human rights on the Internet' A/HRC/32/L.20 (2016) at para 1 (accessible at: [https://www.article19.org/data/files/Internet\\_Statement\\_Adopted.pdf](https://www.article19.org/data/files/Internet_Statement_Adopted.pdf)).

<sup>3</sup> For more see Juan Carlos Lara, 'Internet access and economic, social and cultural rights', Association for Progressive Communications, (2015) at pp 10-11 (accessible at: <https://www.apc.org/en/pubs/internet-access-and-economic-social-and-cultural-r>).

<sup>4</sup> This has been inferred from the *travaux préparatoires* of the ICCPR that prior restraints are absolutely prohibited under article 19 of the ICCPR. See Marc J Bossuyt, 'Guide to the "Travaux Préparatoires" of the International Covenant on Civil and Political Rights', Martinus Nijhoff at p 398 (1987) (accessible at: <https://brill.com/view/title/9771>).

In a landmark case setting this precedent, in June 2020, the Economic Community of West African States (ECOWAS) Community Court of Justice ruled that the internet shutdown implemented by the Togolese government in 2017 was illegal (see here: [http://prod.courtecowas.org/wp-content/uploads/2020/09/JUD\\_ECW\\_CCJ\\_JUD\\_09\\_20.pdf](http://prod.courtecowas.org/wp-content/uploads/2020/09/JUD_ECW_CCJ_JUD_09_20.pdf)).

- **The freedom to choose among information sources.** The 2017 Report of the [UN Special Rapporteur on freedom of expression](#) notes that in the digital age the freedom to choose among information sources is meaningful only when internet content and applications of all kinds are transmitted without undue discrimination or interference by non-state actors, including providers.<sup>5</sup> This concept is known as network neutrality, the principle that all internet data should be treated equally without undue interference.<sup>6</sup> In Africa, there has been significant debate about ‘zero-rating’, a process in which a mobile operator does not count the usage of certain applications or websites towards a user’s monthly data allotment, rendering it ‘free.’<sup>7</sup>
- **The right to privacy.** Exercising privacy online is increasingly difficult in a world in which we leave a digital footprint with every action we take online. While data protection laws are on the rise across the world, including Africa, they are of widely varying degrees of comprehensiveness and effectiveness, as well as enforcement.<sup>8</sup> Government-driven mass surveillance is also on the rise as a result of the development of technology that enables the interception of communications in a variety of new ways, such as biometric data collection and facial recognition technology.<sup>9</sup>

## WHAT IS AN INTERNET INTERMEDIARY?

Internet intermediaries play an important role in protecting freedom of expression and access to information online. An internet intermediary is an entity which provides services that enable people to use the internet, falling into two categories: (i) conduits, which are technical providers of internet access or transmission services; and (ii) hosts, which are providers of content services, such as online platforms (e.g. websites), caching providers and storage services.<sup>10</sup>

Examples of internet intermediaries are:

- Network operators, such as MTN, Econet and Safaricom.

In January 2020, a High Court in Kenya handed down a judgment finding that a new national biometric identity system could not be rolled out until a comprehensive data protection framework was in place (see here: <http://kenyalaw.org/caselaw/cases/view/189189/>).

<sup>10</sup> Association for Progressive Communications, ‘Frequently asked questions on internet intermediary liability’ (2014) (accessible at: <https://www.apc.org/en/pubs/apc%E2%80%99s-frequently-asked-questions-internetintermed>).

- Network infrastructure providers, such as Cisco, Huawei, Ericsson and Dark Fibre Africa.
- Internet access providers, such as Comcast, MWeb and AccessKenya.
- Internet service providers, such as Liquid Telecommunications South Africa, iBurst, Orange, and Vox Telecom.
- Social networks, such as Facebook, Twitter and LinkedIn.

One of the most challenging questions relating to internet intermediaries is whether they constitute publishers in the traditional sense of the word. Is an Internet Service Provider (ISP) liable for the content it hosts on behalf of others? Increasingly, courts are finding that an ISP does not “publish” more than the supplier of newsprint, or the manufacturer of broadcasting equipment does. As pointed out by the UN Special Rapporteur on Freedom of Expression in 2011:

“Holding intermediaries liable for the content disseminated or created by their users severely undermines the enjoyment of the right to freedom of opinion and expression, because it leads to self-protective and over-broad private censorship, often without transparency and the due process of the law.”<sup>11</sup>

On the other hand, the increasing power and influence of multinational technology companies has sparked calls for greater transparency and accountability over their internal operations and the decisions they make that have significant effects on the exercise of the rights to freedom of expression and access to information around the world, such as decisions to remove specific content, ban particular users from their platforms, or to allow and promote political advertising.

Some countries in Africa have laws providing for the limitation of intermediary liability, such as Ghana and Uganda.<sup>12</sup> To protect themselves from liability even in cases where such legislation does not exist, intermediaries often develop terms and conditions that specify their responsibilities and those of their customers.<sup>13</sup> Other countries in Africa have laws that explicitly make intermediaries liable for their actions regarding content posted using their services.<sup>14</sup> The High Court of Tanzania ruled in 2017 in *Jamii Media v The Attorney General of Tanzania and Another*<sup>15</sup> that government requests for the disclosure of user information

<sup>11</sup> OHCHR, Report of the Special Rapporteur on the promotion and protection of the right to freedom of opinion and expression’ (2011) (accessible at:

<sup>12</sup> See article 92 of Ghana’s Electronic Transactions Act of 2008 (accessible at:

[https://www.researchictafrica.net/countries/ghana/Electronic\\_Transactions\\_Act\\_no\\_772:2008.pdf](https://www.researchictafrica.net/countries/ghana/Electronic_Transactions_Act_no_772:2008.pdf))

and Section 29 of Uganda’s Electronic Transactions Act of 2011 (accessible at: [https://www.ug-cert.ug/files/downloads/Electronic%20Transactions%20Act%20\(Act%20No.%208%20of%202011\).pdf](https://www.ug-cert.ug/files/downloads/Electronic%20Transactions%20Act%20(Act%20No.%208%20of%202011).pdf)).

<sup>13</sup> CIPESA, ‘State of Internet Freedom in Africa 2017,’ at p 23 (2017) (accessible at:

[https://cipesa.org/?wpfb\\_dl=254](https://cipesa.org/?wpfb_dl=254)).

<sup>14</sup> For example, article 30 of Burundi’s Law 100/97 of 2014 on electronic telecommunications provides that operators of electronic communications are fully responsible for fighting fraud on their domains and article 53 of the Law No 1/15 of 2015 regulating the media, provides that media organisations are responsible for any articles published on their portals, even where the person published anonymously.

<sup>15</sup> High Court of Tanzania, Miscellaneous Civil Cause No. 9 of 2016 (2017) (accessible at: <https://thrdc.or.tz/wp-content/uploads/2019/09/JAMII-MEDIA-Judgment-20-Mar-2017.pdf>).

from an internet intermediary were justified, and that the law governing such disclosures was not unconstitutional, despite a lack of regulations to govern the enforcement of the Act.<sup>16</sup>

In addition, internet intermediaries are increasingly being used by states to police the internet through direct requests to take down content or interfere with internet access, decisions which are often made outside of formal legal and regulatory frameworks and which lack transparency and public scrutiny.<sup>17</sup> The Democratic Republic of Congo, for example, states in article 50 of the [Framework Law No. 013/2002](#) on Telecommunications that the refusal to grant the request of the authority may lead to the temporary or definitive withdrawal of the operating license or to other penalties.<sup>18</sup> After protests against the government in Zimbabwe in early 2019, the head of a major telecommunications provider, Econet, was candid in explaining to customers that limitations in network access were a direct response to a directive from the Zimbabwean government.<sup>19</sup> This, clearly, has serious consequences for freedom of expression online.

## THE BORDERLESS ENJOYMENT OF FREEDOM OF EXPRESSION

The particular opportunity that freedom of expression online presents is that the right can be enjoyed regardless of physical borders. People can speak, share ideas, coordinate and mobilise across the globe on a significant and unprecedented scale.

### The internet as a tool for change: the case of #EndSARS

In October 2020, young Nigerians took to the street to protest against the notorious brutality of the Special Anti-Robbery Squad (**SARS**), a special unit of the Nigerian police renowned for harassing, kidnapping, extorting, and brutalising particularly young Nigerians. Within days, the protest's hashtag, #EndSARS, had spread like wildfire on social media and messages of solidarity had been reshared by celebrities, politicians, activists, and concerned citizens around the world.<sup>20</sup>

Before the internet, this would have been next to impossible. The borderless nature of the internet can lead to international pressure being put on states for rights violations, the development of and support for global campaigns, and the fostering of a rigorous marketplace of ideas.

However, the internet also gives rise to particular challenges that need to be addressed. Through the internet, the ability to publish immediately and reach an expansive audience can create difficulties from a legal perspective, such as establishing the true identity of an online speaker, establishing founding jurisdiction for a multi-national claim, or achieving

accountability for wrongdoing that has spread rapidly online, such as the non-consensual dissemination of intimate images.

Moreover, once content has been published online, it can sometimes be difficult to remove. In the 2019 case of *Manuel v Economic Freedom Fighters and Others*,<sup>21</sup> a South African High Court ordered the defendants to delete statements that were deemed defamatory from their social media accounts within 24 hours. However, the deletion of a tweet on Twitter does not necessarily remove it from all platforms, as there are other ways in which the content may have been distributed that are not addressed by the deletion (such as retweets in which persons added a comment of their own).<sup>22</sup> This is a particular challenge for finding effective remedies to claims of defamation, hate speech, or the right to be forgotten.

## THE RIGHT TO FREEDOM OF EXPRESSION ONLINE

International law is clear that the right to freedom of expression exists as much online as it does offline, though there are challenges in implementing this principle in practice. For example, article 19(2) of the [ICCPR](#) is explicit that the right to freedom of expression applies “regardless of frontiers,” and the United Nations Human Rights Council ([UNHRC](#)) [General Comment No. 34](#) further clarifies that this includes internet-based modes of communication.<sup>23</sup>

### Challenges to freedom of expression online

Some examples of new challenges to exercising freedom of expression online include:

- The blocking, filtering, and removal of content, often executed by internet intermediaries on behalf of government outside of regulatory or legislative provisions, and with little transparency or accountability.
- Online content regulation through overly broad and vague cybercrimes legislation intending to counter genuinely criminal activity online, such as child pornography, but often misused by governments to stifle criticism and free speech.<sup>24</sup>
- The rapid growth in mis- and disinformation on online platforms leading to backlash from states, who attempt to regulate it with broad ‘fake news’ regulations.<sup>25</sup>
- Defining and protecting journalists and the media in an environment now saturated with bloggers and social media writers, and defending them from online harassment, particularly women who are disproportionately subject to online harms.
- Enabling free and equal access to the internet, including overcoming the challenges of unaffordability while preventing potential distortions and filtering of content.<sup>26</sup>

<sup>26</sup> For more see Module 3 in this series from Media Defence on ‘Access to the internet’.

- Tackling the spread of hate speech on online platforms without placing undue responsibility on private actors to proactively limit content on their platforms.
- Protecting the public from invasive uses of private data and protecting anonymous communications, while simultaneously enabling accountability for illegal behaviour online, such as child sexual abuse material (**CSAM**).
- The use of automated systems, including those using artificial intelligence (**AI**), to filter and monitor online speech and to make decisions about the removal of content, as well as to make automated decisions about users of digital tools in ways that are potentially biased and discriminatory.

## **CONCLUSION**

Digital rights is an emergent and dynamic field. Protecting digital rights involves a host of new actors that did not exist in previous generations of the media, such as internet intermediaries. The internet is an incredibly powerful tool for social progress and the fuller realisation of human rights, but it also gives rise to particular challenges. Nevertheless, international law is clear that the same rights that apply offline also apply online, and while those challenges might be immense, the benefits of getting it right — a free and fair internet accessible to all — are too important not to take digital rights seriously.
